

Photoelectric Reflex Switch
with polarisation filter
Operating Instructions

Safety specifications

- No safety component in accordance with EU machine guidelines.
- Read the operating instructions before starting operation.
- Connection, assembly, and settings only by competent technicians.
- Protect the device against moisture and soiling when operating.

Proper use

The WL12-3 photoelectric reflex switch is an opto-electronic sensor and is used for detection of optical, non-contact detection of objects, animals, and people. A reflector is required for operation.

Starting operation

1 The devices WL12-3 have complementary supply connections:
WL12-3-P only:

Q̄ (dark-switching): if light interrupted, output HIGH,
Q (light-switching): if light received, output HIGH.

WL12-3-N only:

Q̄ (dark-switching): if light interrupted, output LOW,
Q (light-switching): if light received, output LOW.

2 With following connectors only:

Connect and secure cable receptacle tension-free.

Only for versions with connecting cable:

The following apply for connection in **B**: brn = brown, blu = blue, blk = black, wht = white.

Connect cables.

3 Mount suitable reflector opposite photoelectric sensor and align roughly. Adjust for scanning range (see technical data and diagram; x = scanning range, y = operating reserve, yb = operating range).

Connect sensor to operating voltage (see type label).

Adjustment of light reception:

Set > Sensitivity < switch to max.

Determine on / off points of signal strength indicator by swivelling photoelectric sensor horizontally and vertically. Select middle position so that red sender beam hits center of reflector. With optimum light reception, signal strength indicator lights up. If it does not light up or if it flashes, not enough light is being received: readjust and / or clean photoelectric sensor and reflector.

4 Object detection check:

Move object into the beam; the strength indicator should switch off. If it does not switch off or continues to blink, reduce the sensitivity using the > Sensitivity < switch until it switches off. It should switch on again after the object is removed. If it does not switch on again, adjust the sensitivity until the switching threshold is set correctly.

Maintenance

SICK sensors are maintenance-free.

We recommend doing the following regularly:

- clean the external lens surfaces
- check the screw connections and plug-in connections

No modifications may be made to devices.

Subject to change without notice. Specified product properties and technical data are not written guarantees.

Reflexions-Lichtschranke
mit Polarisationsfilter
Betriebsanleitung

Sicherheitshinweise

- Kein Sicherheitsbauteil gemäß EU-Maschinenrichtlinie.
- Vor der Betriebsnahme die Betriebsanleitung lesen.
- Anschluss, Montage und Einstellung nur durch Fachpersonal.
- Gerät bei Inbetriebnahme vor Feuchte und Verunreinigung schützen.

Bestimmungsgemäße Verwendung

Die Reflexions-Lichtschranke WL12-3 ist ein optoelektronischer Sensor und wird zum optischen, berührungslosen Erfassen von Sachen, Tieren und Personen eingesetzt. Zum Betrieb ist ein Reflektor erforderlich.

Inbetriebnahme

1 Die Geräte WL12-3 haben antivalente Schaltausgänge:

Nur WL12-3-P:
Q̄ (dunkelschaltend): bei Lichtunterbrechung Ausgang HIGH,
Q (hellschaltend): bei Lichtempfang Ausgang HIGH.

Nur WL12-3-N:
Q̄ (dunkelschaltend): bei Lichtunterbrechung Ausgang LOW,
Q (hellschaltend): bei Lichtempfang Ausgang LOW.

2 Nur bei den Steckerversionen:

Leitungsdose spannungsfrei aufstecken und festschrauben.

Nur bei den Versionen mit Anschlussleitung:

Für Anschluss in **B** gilt: brn = braun, blu = blau, blk = schwarz, wht = weiß.

Leitungen anschließen.

Wartung

SICK-Sensoren sind wartungsfrei.

Wir empfehlen, in regelmäßigen Abständen - die optischen Grenzflächen zu reinigen - Verschraubungen und Steckverbindungen zu überprüfen

Veränderungen an Geräten dürfen nicht vorgenommen werden.

Irrtümer und Änderungen vorbehalten. Angegebene Produkteigenschaften und technische Daten stellen keine Garantieerklärung dar.
